**Hand Spray Guns**

# GKR

METALURJİ A.Ş.

**Waltech HSG-23 Series Hand Spray Guns** are designed to withstand the challenges of mold lubrication applications in both die casting and forging operations.

### How to Use?

**Waltech HSG-23 Series** can be easily operated by a gloved operator. When the trigger is pressed in the first stage, the air blowing process begins. Pressing the trigger further allows for the atomization of the liquid lubricant and its subsequent application to the mold surfaces. When the hand spray guns are supplied with pressurized lubricant, a higher amount of lubricant can be applied.

### Hand Spray Guns Lengths:

HSG-23/300 cm

HSG-23/400 cm

HSG-23/500 cm
